

## **Leader in Advanced Phishing Threat Protection, IRONSCALES, Selected to Prestigious Microsoft ScaleUp Program**

*As one of ten companies chosen out of many applicants, IRONSCALES will benefit from sales, marketing and technical support from one of the world's most successful tech companies*

TEL AVIV ([PRWEB](#)) March 27, 2018 -- [IRONSCALES](#), the world's first automated phishing prevention, detection and response platform, today announced that it has been selected to participate in [Microsoft's ScaleUp Program](#) in Tel Aviv, which was previously known as the Microsoft Accelerator. As one of ten companies chosen out of many applicants, IRONSCALES will benefit from the ScaleUp program's access to sales, marketing and technical support. This mentorship will also include a co-selling program with Microsoft's existing salesforce. Notable security alumni of the Microsoft ScaleUp program include Siemplify, SCADAfence and Veridium, among more than 50 others.

"IRONSCALES management team is motivated, and the technology that it has developed is already showing promise, which is the perfect criteria for the program," said Inge Lammertink, Microsoft ScaleUp Tel Aviv's program marketing manager. "Our goal is to help IRONSCALES mature and build on its previous success as it prepares for the next phase of its development by providing the tools, resources, connections, knowledge and expertise needed to achieve rapid scale."

IRONSCALES' technology seamlessly integrates with Microsoft Office365 environments for those customers looking to bolster their anti-phishing and email security. The platform was specifically built to automatically prevent, detect and respond to sophisticated spear-phishing attacks that can now easily evade secure email gateways and other legacy email security tools. IRONSCALES combines micro-learning phishing simulation and awareness training (IronSchool), with advanced mailbox-level anomaly detection ([IronSights](#)), automated phishing forensics & incident response ([IronTraps](#)) and real-time automated actionable intelligence sharing ([Federation](#)) technologies. By providing protection at every stage of an email phishing attack, IRONSCALES' customers reduce the time from email phishing attack discovery to enterprise-wide remediation from days, weeks or months to just seconds, with little to no security team

"Having one of the world's largest and most prestigious technology companies recognize us as innovative and enterprise-ready, and so worthy of inclusion in its program, is a huge endorsement for both the management team but also the technology we've developed," said IRONSCALES founder and CEO Eyal Benishti.

[Microsoft ScaleUp](#) helps start-ups grow across the globe with an intensive Microsoft-led program in eight global offices in Bangalore, Beijing, Berlin, London, Seattle, Shanghai, Sydney, and Tel Aviv. It is designed to accelerate growth with a streamlined path into the Microsoft Partner Network. After the four-month program ends, IRONSCALES will be part of Microsoft's Global Alumni community of founders, a powerful resource, that will allow it to actively network and create business opportunities and partnerships around the world.

Added Eyal: "This relationship will introduce IRONSCALES to Microsoft's select sellers and mentors whose expertise and support will help shape our go-to-market strategy and support our team as we realise our dreams to scale up both the technology we've created but also our endeavour to deliver robust phishing solutions to users' mailboxes, where it will have the biggest impact in preventing attacks being deployed."

#### About IRONSCALES

IRONSCALES is the leader in anti-email phishing technologies. Using a multi-layered and automated approach starting at the mail-box level to prevent, detect and respond to today's sophisticated email phishing attacks, IRONSCALES expedites the time from phishing attack discovery to enterprise-wide remediation from months to seconds, by significantly reducing the workload on incident responders. Headquartered in Tel Aviv, Israel, IRONSCALES was founded by a team of security researchers, IT and penetration testing experts, as well as specialists in the field of effective interactive training, in response to the phishing epidemic that today costs companies millions of dollars annually. It was incubated at the 8200 EISP, the top program for cyber security ventures, founded by alumni of the Israel Defense Forces' elite Intelligence Technology unit.
